

Describe the Venus Flytrap.	<p>Triple fold, cut on dotted line. Use your own research or cut out answers and glue inside.</p> <p>Glue this to your page.</p>	
How does it attract it's prey?		<p>Venus Flytrap</p>
What does it digest?		

A plant that grows to look like a tube. Some species look like vases and some species have a "hood" on top.
A cup of sweet smelling nectar.
Mostly insects, but small animals like birds, rodents and frogs have also been digested.

Answers - Pitcher Plant

A small plant with tiny leaves. The leaves are shaped like clams. The leaves are lined with hairs that snap shut when touched.
Sweet aroma to attract insects.
It eats ants, flies, moths, beetles and grasshoppers.
