Bladderwort

There are flowers on top, but below there are multiple traps or bladders that hang in the water. The plant grows in swampy areas.

Animals are sucked inside the sac in less than a second when they bump against the hairs.

Water fleas, worms, small insects and tiny fish.

These plants look like they have tiny spikes or tentacles. The tentacles will bend inward to bring the insect closer.

Sweet aroma to attract insects.

A fly, butterfly or any sugar loving insect.
