Vocabulary

Words

A nutrient needed in order to make molecules so that a plant can thrive and reproduce. This is normally taken from the soil but if the soil is poor in nitrogen, it gets it from the insect.

A nutrient is a chemical that an organism needs to live and grow or a substance used in an organism's metabolism which must be taken in from its environment.

Plants that make their seeds from pollinated flowers.

Another term used to describe carnivorous plants.

The process by which plants produce food. By using light, leaves put together carbon dioxide and water to make sugar and oxygen.
